

## Case Study

Client- MAPP Property Management Ltd

Location- Blyth Valley Business Park

### Overview:

Extensive fire stopping works carried out at Blyth Valley Business Park, Solihull. This project contains several engineering challenges from a compliance perspective; however, these challenges have been met by working closely with the fire engineer to deal with installation issues from the original construction detail. This has allowed us to cooperate with the client to give them compliance and piece of mind.

There are several occupants within the building who we have to be mindful of when carrying out works so to allow their daily working day to proceed with minimum disruption.
