

Case Study

Client- Southport & Ormskirk District General Hospital

Location- Southport & Ormskirk

Overview:

Extensive Passive Fire protection works have been carried out at both hospitals over a number of years to ensure that they are fully compliant.

The work is complex as we are often working on live wards and in patient areas. There are also some areas that can only be accessed on night shift such as theatres.

These particular challenges are common on live NHS sites and one the Profire Systems Ltd are familiar with as the NHS is our biggest client.
